Submitted Jul 1 at 4:04pm

This attempt took 6 minutes.

Question 1	0.4 / 0.4 pts
<p>下列敘述哪一個最符合終身機器學習的學習目標: (選一個)</p> <p>Which descriptions meet the criteria and the goal of lifelong learning? (choose 1)</p>	

我們想要一個泛化能力很好的模型，透過將所有任務資料合成一個巨大的資料集訓練模型，訓練完之後，可以在各個任務上都達到最好的表現。 We need a model with good generalizability, and it could reach the best performance on all of the tasks by collecting all of the data from each tasks as a large training data.

模型經過訓練後，當模型需要應用在一個新的任務上時，模型可以很快的適應在新的任務上，在終身機器學習裡，模型的學習目標是訓練出一個好的初始化參數起點。 The model aimed to find new initialization parameters that could quickly adapt to new tasks.

我們期望有一個模型，有序的連續訓練在不同新的任務上，它在過去的任務上，始終可以得到不錯的表現。所以訓練好之後，模型不會忘記舊的任務。 We expect a model that trained on different tasks continuously and could reach good performance and it could not forget the old task.

Correct!

Question 2

Original Score: 0 / 0.4 pts **Regraded Score: 0.4 / 0.4 pts**

⚠ This question has been regraded.

在 sample code 內的方法都是使用基於約束方法的終身學習作法，請問這些sample code 作法的核心概念是什麼？（選一個）

We used regularization-based life-long learning methods in the sample codes. What is the core concept of these sample codes? (choose 1)

Correct!

我們希望模型的每一個參數會存在一個約束參數去約束模型的更新方向，這個參數可以幫助模型在訓練新任務時，盡量找出對於舊任務還有新任務共同有利的更新方向，使之訓練好的模型參數，不會在舊任務上發生災難性的遺忘。 We hope a set of constraint parameters correlated to the model parameters to constrain the model. These parameters tried to find a common update direction between the current training task and past tasks. So the model would not catastrophically forget previous tasks.

我們在訓練每一個任務時，會存下部份的訓練資料，並回放這一小部份的資料在新任務上，"回放" 最簡單的作法是將其加入新任務的訓練資料一起訓練，使模型不會發生災難性遺忘。 We stored part of the training data of tasks in the replay buffer. When we train a model on a new task, we will use the data from the replay buffer and add it into the current training task's data to avoid catastrophically forgetting.

模型每訓練一個新任務，都會有一個不同分支的任務模型去負責新任務，使整個模型做到在舊的任務上保持原本的表現。 Each time when the model is trained on a new task, there will be a different branch to handle the new task so that the entire model can maintain the original performance on the previous tasks.

模型會透過遮住模型內的參數去達成不同的任務，因此每一個任務都會有一個參數遮罩使得模型透過參數遮罩之後，變成不同的子模型，可以很好的表現在不同的任務上，達到不忘記舊的任務。 The model will achieve different tasks by masking the parameters in the model, so each task will have a parameter mask so that the model will become a different sub-model after passing through the parameter mask, which can be well represented on different tasks. Reach the task of not forgetting the old.

Question 3

Original Score: 0 / 0.4 pts **Regraded Score: 0.4 / 0.4 pts**

❗ This question has been regraded.

下列哪些是正確的敘述: (選一個)

Which of the following are the correct statements? (choose 1)

『終身機器學習即是讓模型連續學習一系列的任務，並將難度分級，從簡單的任務學到困難的任務，希望訓練後，可以增強模型的表現，決定任務的順序是這一學派的關鍵要素』。“Life long learning allows the model to continuously learn a series of tasks and grade the difficulty, from simple tasks to difficult tasks. We hopes that after training, the performance of the model can be enhanced, and the order of tasks is determined to be this Key of Life long learning”.

Correct!

『多任務學習是希望一個模型可以處理很多不同的任務，所以在訓練時，會將所有任務的訓練資料倒在一起，變成一個巨量的訓練資料，一次使用多個任務的訓練資料以及對應的目標函數一起更新模型的參數。』“Multi-task learning hopes that a model can handle many different tasks. Therefore, during training, the training data of all tasks will be poured together to become a huge amount of training data. Using the training data of multiple tasks and the corresponding objective functions to update the parameters of the model at a time.”

『終身機器學習是希望一個模型可以處理不同的任務，為了做到這件事情，會希望模型經過訓練後，學習到一個好的參數起始點，之後，透過極少訓練資料以及更新次數，適應在新的任務上。』“Life long learning hopes that a model can handle different tasks. To do this, we hoped that the model would learn a good starting point for parameters after training. After that, it will adapt to the new task through very little training data and update times.”

『線上學習 (Online Learning)是在學習時，先讓模型學習簡單的任務，在一定的更新次數後，加深任務的難度，讓模型在訓練時，從簡單的任務學習到困難的任務，藉此使模型表現變好也可以在所有任務上表現不錯，定義何謂簡單的任務，何謂困難的任務是這個學習的發展方向。』“Online learning let the model learn simple tasks first. After a certain number of updates, we enhance the difficulty of the task. We let the model learn from simple tasks to difficult tasks, so the improvements of the model can also appear on all tasks. Defining what is simple and difficult is the direction of development of lifelong learning.”

Question 4

Original Score: 0 / 0.4 pts **Regraded Score: 0.4 / 0.4 pts**

❗ This question has been regraded.

sample code 內的任務是將mnist資料集透過什麼操作得到不同任務的資料? (選一個)

Which operation on the MNIST dataset is used to obtain the task in sample code? (choose 1)

Correct!

- ☒ A. 透過對輸入做隨機置換位置得到 Randomly change the position of the input
- ☐ B. 透過對輸入做隨機遮罩數值得到 Randomly mask the value of the input
- ☐ C. 透過對輸入做隨機截取部份得到 Randomly pruning of the input
- ☐ D. 透過對輸入做隨機角度翻動得到 Randomly change the angle of the input

Question 5

Original Score: 0 / 0.4 pts **Regraded Score: 0 / 0.4 pts**

❗ This question has been regraded.

Elastic Weight Consolidation 這個方法，訓練好了第一個任務之後，在訓練新的任務時，“守衛”這個參數會如何從第一個任務的資料得到? (定義第一個任務的資料為 V ，內只有一筆資料記作 x ，以及對應的標籤 y ， L 為損失函數(交叉熵取負號)， θ 為訓練好第一個任務的模型參數， $\theta(x)$ 定義為通過模型後的標籤機率分佈) (選一個)

In Elastic Weight Consolidation, after being trained on the first task, how do we get “guard” from the data of the first task? (We defined the data of the first task as V , only one data x and its ground truth y in V . is the

loss function L . θ is denoted as the model's parameters trained on the first task. $\theta(x)$ is the model's output.) (choose 1)

Correct Answer

☐ $(\frac{\partial L(\theta(x), y)}{\partial \theta})^2$

You Answered

☒ $(\frac{\partial L(\theta(x), y)}{\partial \theta})$

☐ $(\frac{\partial L(\theta(x), \min(\theta(x)))}{\partial \theta})$

☐ $(\frac{\partial L(\theta(x), y)}{\partial x})^2$

Question 6

Original Score: 0 / 0.4 pts **Regraded Score: 0.4 / 0.4 pts**

⚠ This question has been regraded.

在求得EWC約束項的時候，需要使用到 label 的資訊。

When obtaining the EWC regularization term, we need the label information

Correct!

☒ 正確

☐ 錯誤

問題 7

Original Score: 0 / 0.4 pts **Regraded Score: 0.4 / 0.4 pts**

⚠ This question has been regraded.

請問 sample code 的 mas class 內 第39、40 行的程式碼在做什麼? (選一個)
What are the line 39, 40 in sample code's mas class doing? (choose 1)

Correct!

MAS的守衛參數，主要是由 L2 norm 的平方得到後處理得到，相當於先對輸出向量平方再加總向量內的數值。 The guard parameters of the MAS are mainly obtained by post-processing the square of the L2 norm, which is equivalent to squaring the output vector and then summarizing the values in the vector.

MAS守衛參數的概念，其原理只是想知道模型內個別參數對模型輸出的影響程度，故只考慮了數值的大小。 The concept of MAS guard parameters is knowing the degree of influence of individual parameters in the model on the model's output, so only the amount of change is considered.

MAS的守衛參數，主要是由 L1 norm 的平方得到後處理得到，相當於先對輸出向量平方再加總向量內的數值。 The guard parameters of the MAS are mainly obtained by post-processing the square of the L1 norm, which is equivalent to squaring the output vector and then summarizing the values in the vector.

問題 8

Original Score: 0 / 0.4 pts **Regraded Score: 0.4 / 0.4 pts**

⚠ This question has been regraded.

請問 sample code 的 mas class 內 第 46 行的程式碼為什麼要這麼寫？

Please explain why the code in line 46 of sample code's mas class is written like this? (choose 1)

Correct!

計算MAS守衛參數時，所有資料算完的微分項後，是只取其量值，故取微分項的絕對值。 For the concept of MAS guard parameters, the differential term is calculated from all test data then we take its magnitude, so we take the absolute value of the differential term.

MAS的守衛參數，主要是由該任務對應 loss 的平方加總所有資料後處理得到，相當於先對輸出向量平方再加總起來。 The guard parameters of the MAS are mainly obtained by summing up all the data after the square of the loss corresponding to the task, which is equivalent to squaring the output vector and then summing it up.

MAS的守衛參數，主要是由 L2 norm 的平方得到後處理得到，相當於先加總輸出向量內的數值再平方起來。 The guard parameters of the MAS are mainly obtained by post-processing the square of L2 norm, which is equivalent to summing the values in the output vector and then squaring them.

問題 9

Original Score: 0.13 / 0.4 pts **Regraded Score: 0.13 / 0.4 pts**

❗ This question has been regraded.

Memory Aware Synapse 這個方法，下列有關“守衛”這個參數矩陣的敘述，哪些是正確的？(選三個)
In Memory Aware Synapse, which of the following statements about the parameter matrix "Guard" are correct? (choose 3)

Correct!

這個守衛的作用是用來處理模型訓練後不會發生災難性遺忘而設立的 The role of this guard is set up to avoid catastrophic forgetting after model training.

Correct Answer

可以從一次微分項經過處理得到 It can be obtained from the first differential term after processing

是使用L1距離處理得到 It is obtained by the L1 norm

Correct!

是使用L2距離處理得到 It is obtained by the L2 norm

You Answered

是使用交叉熵處理得到 It is obtained by the cross entropy

問題 10

Original Score: 0 / 0.4 pts **Regraded Score: 0.4 / 0.4 pts**

⚠ This question has been regraded.

在求得MAS約束項的時候，不需要使用到 label 的資訊。

When obtaining the MAS regularization term, we don't need the label information.

Original Score: 0 / 0.4 pts **Regraded Score: 0 / 0.4 pts**

! This question has been regraded.

SI 和 EWC 方法上最大的不同在於?(選一個)

What is the biggest difference between SI and EWC? (choose 1)

☐ SI 對應的約束項需要使用到label 資訊。 SI need the label information

☒ SI 對應的約束項不需要使用到label資訊 Si doesn't need label information

☐

SI 是透過loss在該任務的變動量與參數在該任務更新前後參數的變動量處理得到守衛數值。 SI obtains the guard value by processing the change of loss in the task and the change of the parameters before and after the task training.

☐

SI 的 λ 超參數會和EWC非常不同。 SI's λ is very different to EWC's λ .

You Answered

Correct Answer

問題 12

Original Score: 0 / 0.4 pts Regraded Score: 0.4 / 0.4 pts

! This question has been regraded.

12. 請問sample code內si class的 91行程式碼實際上在處理什麼?(選一個)

What is the code in line 91 of SI class exactly doing? (choose 1)

☐

累加 loss 對該參數在前後一步所造成的變動量 Accumulating the changing of loss for corresponding parameter in update steps before and after.

Correct Answer

loss的微分量乘上該參數在前後兩步的差異 The differential value of loss multiplies the changing of the parameter in two steps before and after.

You Answered

在訓練的每一步衡量該參數的重要程度 To evaluate the importance of the parameter on each training step.

在新任務的一開始，衡量該參數的重要程度 To evaluate the importance of the parameter in the beginning of a new task.

Question 13

0 / 0.4 pts

在求得SI約束項的時候，不需要使用到 label 的資訊。

When obtaining the SI regularization term, we don't need label information.

You Answered

問題 17

Original Score: 0 / 0.4 pts **Regraded Score: 0.4 / 0.4 pts**

! This question has been regraded.

SCP 提出來的作法，主要是因為過去的方法出現了什麼問題？(選一個)

The method proposed by the SCP is dealing with what problems in the past method? (choose 1)

Correct!

過去如EWC, MAS 產生的守衛會太過保守於舊任務的表現，反而限制太多，導致在新任務的表現降低。 In the past, guards generated by EWC and MAS would be too conservative in the performance of the old task. It could lead to too many restrictions, resulting in lower performance in the new task.

過去如EWC, MAS 需要調過多的超參數，而且表現容易受到超參數的影響，讓研究者很難評估方法的好壞。 In the past, such as EWC and MAS, it was necessary to adjust too many hyper-parameters. The performance was easily affected by the hyper-parameters, which made it difficult for researchers to evaluate the quality of the method.

過去如EWC, MAS的作法，不能靈活的使用在不同損失函數的任務上。 In the past, methods such as EWC and MAS could not be used flexibly on tasks with different loss functions.

過去如EWC, MAS的作法，它們所測試的資料集過於簡單，和現實任務差異太大。 In the past, such as the practice of EWC and MAS, the data sets they tested were too simple and very different from the actual tasks.

問題 18

Original Score: 0.4 / 0.4 pts **Regraded Score: 0.4 / 0.4 pts**
